Progress in Surface Science

An International Review Journal

EDITOR: Professor Sydney G. Davison

AUTHOR AND SUBJECT INDEX

Volume 44, 1993

PERGAMON

Progress in Surface Science

EDITOR-IN-CHIEF:
PROF. SYDNEY G. DAVISON

MANAGING EDITOR:
PRUDENCE G. DAVISON

EDITORIAL OFFICE
Applied Mathematics Department
University of Waterloo
Waterloo, Ontario
Canada N2L 3G1

Tel: (519) 885-1211 (ext. 3161)
Fax: (519) 746-6530
e-mail: watserv1.uwaterloo.ca

ADVISORY BOARD

I. BARTOŠ
Academy of Sciences
Prague, Czech Republic

B.E. CONWAY
University of Ottawa
Ontario, Canada

A.S.G. CURTIS
University of Glasgow
Scotland

A.W. CZANDERNA
NREL Golden,
Colorado, U.S.A.

J.G. DILLARD
Virginia Polytechnic Institute
and State University
Blacksburg, Virginia, U.S.A.

D.D. ELEY
University of Nottingham
England

P.J. ESTRUP
Brown University, Providence,
Rhode Island, U.S.A.

V.E. HENRICH
Yale University, New Haven,
Connecticut, U.S.A.

S. KONO
Tohoku University
Aobaku, Japan

J. KOUTECKY
Freie Universität
Berlin, Germany

R.M. LATANSION
MIT, Cambridge,
Massachusetts, U.S.A.

J.D. LEVINE
Texas Instruments
Dallas, Texas, U.S.A.

A.A. MARADUDIN
University of California
Irvine, California, U.S.A.

K. MULLER
University of Erlangen-Nurnberg
Germany

A.G. NAUMOVETS
Academy of Sciences
Kiev, Ukraine

J.B. PENDRY
Imperial College
London, England

S.T. PICRAUX
Sandia National Laboratory
Albuquerque, New Mexico, U.S.A.

T.N. RHODIN
Cornell University
Ithaca, New York, U.S.A.

M. STĘŚLICKA
University of Wrocław
Poland

H. TI TIEN
Michigan State University
East Lansing, Michigan, U.S.A.

H. UEBA
Toyama University
Japan

L. WEISS
Roswell Park Memorial Institute
Buffalo, New York, U.S.A.

R.F. WILLIS
Pennsylvania State University
University Park, Pennsylvania, U.S.A.

K. ZHANG
Fudan University, Shanghai,
People's Republic of China

Production Editor: Douglas Cherno.

Publishing, Subscription and Advertising Offices: Elsevier Science Inc., 660 White Plains Road, Tarrytown, New York 10591-5153, U.S.A., E-mail Address: ESUK.USA@ELSEVIER.COM; and Elsevier Science Ltd, The Boulevard, Langford Lane, Oxford, OX5 1GB, England.

Published Monthly. *Annual Institutional Subscription Rates* (1994): North, Central and South America, U.S.$645.00, Rest of World £418.00. Associated Personal Subscription Rates are available on request for those whose institutions are library subscribers. Sterling prices exclude VAT. Non-VAT registered customers in the European Community will be charged the appropriate VAT in addition to the price listed. Prices include postage and insurance and are subject to change without notice.

List of Contents, Volume 44, 1993

Announcements 1

Oxygen Chemisorption on Metal Surfaces: General Trends for Cu, Ni and Ag
by F. BESENBACHER and J.K. NØRSKOV 5

Monte Carlo Simulation of Thin Film Growth on Si Surfaces
by T. KAWAMURA 67

Dynamics of Vibrational Excitation in Molecule-Surface Interactions
by H. KASAI and A. OKIJI 101

Oscillatory Reactions on Single Crystal Surfaces
by R. IMBIHL 185

PROGRESS IN SURFACE SCIENCE, VOLUME 44

SUBJECT INDEX

Adiabatic effects
  versus nonadiabatic
    in vibrational excitation
      175-178
Adsorption system(s)
  dissociative 104-121. See
    also Dissociative
    adsorption system
  nondissociative (molecular)
    121-128. See also
    Molecular (nondissocia-
    tive) adsorption system

Bifurcation
  CO and O_2/Pt(100) 216-217
  CO and O_2/Pt(110) 218-219,
    224, 226
  NO and CO reaction, on Pt
    (100) surface 260-273
  periodic forcing and 224, 226
  theory of 204-208, 209
    Hopf 206, 209
    saddle loop 207
    saddle node 205-206
    saddle node of infinite
      period 207
    saddle node of periodic
      orbits 206
Born approximation
  in vibrational scattering 136
  in vibrational states 153-156

Chaotic behavior 325-333
  characteristics of 325-326
  definition of 315
  spatiotemporal 330-332
    chemical turbulence 330-332
    complex Ginzburg-Lindau
      equation in 330-331
    instability in chemical wave
      propagation 332
  temporal 326-330
    deterministic, Pt(110)/CO
      and O_2 326-328
    hyperchaotic versus chaotic
      329-330
    NO and CO/Pt(100) and NO and
      H_2/Pt(100) 330
    transition to 327-328, 330
Chemical waves
  definition of 280
  properties of 281-282
  simulation of, Pt(100)
    studies 294-298
    2-D model surface 296-297
    autocatalytic step in 295
    cellular automaton models
      296-298
    id-model surface 296, 297
    propagating reaction from
      295-296, 297
  in spatiotemporal chaos
    330-332
  in spatiotemporal pattern
    formation 280-282
CO oxidation
  on cylindrical Pt surface
    PEEM studies 293-294
    two Kelvin probe study
      293-294
  on high-index planes of Pt
    226-252. See also
    High-index planes of Pt
  on low-index planes of Pt
    191-226. See also
    Low-index planes of Pt
  on Pd surfaces 252-258
    hysteresis in 252-253
    kinetic oscillations
      hysteresis in 252-253
      oxide model of 252
    simulation results and
      257-258
    subsurface O_2 and 254-257
  on Pt(100)
    MEM image 291-292
    PEEM and LEEM experiments
      291
  on Pt(110)
    PEEM images of 287-288, 290
    standing wave patterns in
      288-289
Cooling, vibrational, in desorp-
  tion 126-127

Desorption
  sticking probability in
    118-119

(Desorption, cont.)
vibrational cooling in 126-127
vibrational heating in 115-117
Dissociative adsorption system 104-121
desorption
sticking probability in 118-119
vibrational heating in 115-117
Eley-Rideal reaction 119-121
experimental findings
adsorption 118-119
desorption process 117-118
potential energy surface in 105-113
2 atoms/surface vibrations 107
curved region 107-108
desorption 112-113
reaction path Hamiltonian 108-113
intramolecular vibrations 106
quantum theory of chemical reactions 105-106
sticking 112
sticking
H_2/Cu, vibrationally assisted 113-115

Eley-Rideal reaction 119-121
Excitation
vibrational
experimental findings 146-148
heating in indirect scattering 144-146
Keldysh Green formalism for 130, 131-135
Markov approximation in 136, 142
master equation approach to 136-142
model of 130-136
non-adiabatic effects, non-Markovian 142-144, 148, 156
nonadiabatic versus adiabatic contributions to 175-178
observation of 129-130
spectroscopy in time domain 157-175. See also Vibrational spectroscopy
surface temperature and 131, 138-139, 146, 147

(Excitation, vibrational...)
translational energy dependence 140-141, 146, 147

Ginzburg-Landau equation, complex 324-325, 330-331
Green function
in terms of Keldysh Green formalism 179-180

Heating
vibrational
in desorption 115-117
in scattering 144-146
High-index planes of Pt
faceting in [001] zone 240-244
comparison of Pt(110) and Pt(210) 240-242
conditions and effect on catalytic activity 240-243
Pt(100) 243, 244
Pt(210) 247-250
reactive orientations 240-243
faceting of (110) surface
ball model in 227, 228
dependence on reaction conditions 239-240
Monte Carlo simulation in 237-238
orientation of O sticking coefficient in 230-232
rate in 229-230, 231
rates of growth/removal 245-246
surface step formation in 227-229, 230
temperature dependence and 244, 245
faceting of Pt(110) 227-240, 251-252
kinetic oscillations and 244-250
reaction condition dependence in 227-233
simulation of 237-240
temperature dependence in 233-234, 244, 245
Turing structure and 227, 234-237
faceting of Pt(210) 247-250
comparison of existence ranges, Pt(100) and Pt(110) 249-250
kinetic oscillations in 247-248

(High-index planes...)
oscillations on cylindrical surface 248-249, 250
Pt(110) SPT and 248-249
Homoepitaxial growth on Si(100)
characteristics of
anisotropy of correlation 83
azimuthal dependence of RHEED intensity oscillations 80-81
monolayer to bilayer mode transition 83, 85
step density evolutions 81-82, 84
temperature dependence, directional step density evolutions 84, 85
relation to RHEED intensity oscillations 79-80
on vincinal Si(100) surfaces
effect of steps and 91
process of 95
step stability and growth rate 91, 92, 93
surface variations and 94, 95
temperature and 91, 92, 93
Hysteresis
in CO oxidation on Pd 252-254
in NO and CO reaction/Pt(100) 261, 263
in NO and CO reactions 261, 263, 264
in NO and H_2 and NO and HN_3 reactions 275, 276

Keldysh Green formalism
in vibrational scattering 120, 131-135
in vibrational states 149-153

Langmuir-Hinshelwood kinetics
differential equations and 208, 210-211, 212-213
limitations of 211-212
Low-index planes of Pt
(100) surface/CO and O_2 212-217
(100) surface CO and O_2
bifurcation analysis 216-217
Langmuir-Hinshelwood equations and 212-213
simulated oscillations 216-216
SPT in 212, 213-214
(110) surface/CO and O_2 217-219

(Low-index...(110) surface)
bifurcations in 218-219
Langmuir-Hinshelwood scheme 217
SPTs in 217-218
bifurcation analysis 204-208
discrete model and 219-222
mean-field theory 220-222
Monte Carlo studies 220-222
Ziff, Gulari, Barshed and 220-222
existence range for 201-203
kinetic oscillations 193-196
Langmuir-Hinshelwood kinetics 208, 210-212
mathematical models for 203-222
overview of single crystal studies and 191-193
periodic forcing and 222-226
application to BZ reaction 223
bifurcation analysis of 224, 226
dynamic phase diagram and 223, 224
response behavior and 223, 225-226
reconstruction model and
formation of subsurface O_2, reversible 201, 202
LEED verification of 198-201
proposed 196-198, 199

Markov approximation, in vibrational states 154-156
Molecular epitaxy growth, RHEED observation technique and 79-80
Molecular (non-dissociative) adsorption system 121-128
desorption
vibrational cooling in 126-127, 128
experimental findings 127-128
gas-molecule-suface interactions 122-124

MATHEMATICAL AND COMPUTER MODELLING

An International Journal

Affiliated to the International Association for Mathematical and Computer Modelling

Editor-in-Chief: **E.Y. Rodin**, *Department of Systems Science and Mathematics, Campus Box 1040, Washington University, One Brookings Drive, St Louis, MO 63130-4899, USA*

(00623)
Subscription Rate 1994: Volumes 19-20 (24 issues) **£924.00 (US$1425.00)**
ISSN 0895-7177

Audience: Mathematicians, Engineers, Economists and anyone using mathematical modelling as a working tool.

AIMS AND SCOPE
Mathematical and Computer Modelling provides a medium of exchange for the diverse disciplines utilizing mathematical or computer modelling as either a theoretical or working tool. Equal attention is given to the mechanics, methodology and theory of modelling with an attempt to advocate either mathematical or computer modelling, or a combination of the two, in an integrative form. While the unifying aspect of the journal is its adherence to quantitative models, it seeks diversity by being concerned with a variety of disciplines, including engineering, biological, medical, environmental, social, behavioural and other sciences. Both theoretical and applied works which employ mathematical or computer modelling will be considered for publication. Papers dealing with experiments shall be considered when the results are presented as an integral part of the modelling process.

A Selection of Papers
G. LEITMAN (USA), **C.S. LEE** (Malaysia), Reduced order feedback control for a two-compartment drug administration model in the presence of model parameter uncertainty.

PROGRESS IN SOLID STATE CHEMISTRY

An International Review Journal

Editors: **Gerd M. Rosenblatt**, *Lawrence Berkeley Laboratory, Materials Science Division, Bldg 62, Room 205, Berkeley, CA 94720, USA* and **Wayne L. Worrell**, *School of Engineering & Applied Science, Office of Graduate Education & Research, University of Pennsylvania, 119 Towne Building, Philadelphia, PA 19104, USA*

(00417)
Subscription Rate 1994: Volume 23 (4 issues) **£214.00 (US$330.00)**
ISSN 0079-6786

Audience: Solid State Scientists, Materials Scientists.

AIMS AND SCOPE
Solid state research, which has become well known as a substantial endeavour amongst physicists, in fact also involves much chemistry. The literature on the subject is so widely dispersed that it has become difficult to obtain a broad and unified assessment of the present state of knowledge. This series undertakes to represent the view-point of the chemist in solid state by providing up-to-date critical reviews written by acknowledged authorities in the field, together with surveys of research progress and specialized articles devoted to recent developments. Particular emphasis is given to relating physical properties and structural chemistry. Whereas structural chemistry in the past concerned itself mostly with perfect solids, most activity now focuses on imperfections. Entities like vacancies, dislocations and positive holes, which have no independent existence outside the solid itself, are of prime importance in today's solid state chemistry. The authorship is international and the subject matter is of interest to chemists, physicists, metallurgists, crystallographers, ceramists and engineers interested in the solid state.

A Selection of Papers
